

tenebrae.

Private settlement on public chains

Wallet-signed, client-side ZK Proofs (Noir).

WHAT SHIPS

1. **Deposit / send / withdraw** — privacy-pool-class flows on Sepolia testnet today.
2. **Compliance-native** — institution upstream; protocol verifies at submit.
3. **Integrator path** — Path A quickstart on docs.tenebrae.xyz.

HONEST BOUNDARIES

- Sepolia testnet — not mainnet production.
- Deposits and withdrawals show public amounts on chain.
- Two-layer compliance — institution upstream; protocol verifies at submit. Not "compliant in {market}".
- Bring your own wallet — Tenebrae is not a wallet product.
- Tier 2–3 batch payroll is roadmap only.
